

CLAIMS

1. An openable/closable mobile communication device having a first display screen and a second display screen that differ in screen size, comprising:

5 a storage unit operable to store data; and
 a display control unit operable to read the data stored in the storage unit and display the data on the first display screen with a device main body in an opened state, and read the same data and display the data on the second display screen
10 with the device main body in a closed state.

2. The mobile communication device of claim 1, wherein
 a screen size of the second display screen is smaller than a screen size of the first display screen.

15

3. The mobile communication device of claim 2, further comprising:

 a detection unit operable to detect whether the device main body is in the opened state or the closed state, wherein

20 the display control unit includes a first storage subunit that corresponds to the screen size of the first display screen, and a second storage subunit that corresponds to the screen size of the second display screen,

 when a notification of the opened state is received from
25 the detection unit, the display control unit reads, from the storage unit, a desired web page which is the data, develops the web page to the first storage subunit as bitmap data, and displays the bitmap data on the first display screen,

and

when a notification of the closed state is received from the detection unit, the display control unit reads the desired web page from the storage unit, develops the web page
5 to the second storage subunit as bitmap data, and displays the bitmap data on the second display screen.

4. The mobile communication device of claim 3, wherein

the display control unit sets a size of a character that
10 is to be developed to the first storage subunit as bitmap data to a size specified by display information of the data stored in the storage unit, and changes a size of a character that is to be developed to the second storage subunit as bitmap data to a minimum size specified by the display information.

15

5. The mobile communication device of claim 4, wherein

the size specified by the display information is one of 36x36 dot, 26x26 dot, 18x18 dot, and 12x12 dot, and
the minimum size is 12x12 dot.

20

6. The mobile communication device of claim 3, wherein

when a size of an image to be developed to the second storage subunit as bitmap data is larger than a size of the second storage subunit, the display control unit reduces the
25 image to a size that can be held in the second storage subunit.

7. The mobile communication device of claim 1, wherein

the data stored in the storage unit is web page content

of a website, the content being acquired via a public network.

8. The mobile communication device of claim 7, wherein

5 a five-point contact key for specifying a link in data displayed on the second display screen is provided on a same surface as the second display screen.

9. A screen switching method for an openable/closable mobile communication device having a first display screen and a
10 second display screen that differ in screen size, comprising:

a recording step of recording data; and

a display control step of reading the data recorded in the recording step and displaying the data on the first display screen with a device main body in an opened state,
15 and reading the same data and displaying the data on the second display screen with the device main body in a closed state.
